

CBR Cocktail Recommender

User Manual

Requirements

To run the system, python 3 needs to be installed. No other external packages or libraries are needed.

Starting the system

The system can be started by performing the following command in the shell/command prompt from the main directory of the project:

```
python main.py
```

Using the system

The system will interact with the user via text output in the terminal. The user will be asked to input commands, whenever necessary a list of possible commands will be displayed.

The system will run for exactly one case recommendation and then shut down, persisting the changes it made to file.

In order to get a new recommendation, the system can simply be started again, using all new information from previous runs.
